Model Conditions for Pet Vending Licensing 2013
This document has been prepared in the best interests of animal welfare and to improve pet shop management. No liability rests with contributing bodies for the circumstances arising out of the application of conditions contained within the document.

Schedule H – Reptiles and Amphibians.............................................25

Schedule I – Fish .........................................................................................28

Information ..................................................................................................29

Useful Contacts...........................................................................................30
Introduction

The Model Conditions set out in this document are the working group’s recommendations for the basic minimum standards considered necessary to ensure the health, safety and welfare of animals in pet shops.

Licensing authorities should apply and enforce the licence conditions sensibly and appropriately.

These Model Conditions should not be considered as a complete manual on animal husbandry. It is a living document which will be revised from time to time to take into account new knowledge of animal physiology and behaviour as well as advances and development in standards of animal welfare.

Local authorities in England, Scotland and Wales issue licences to proprietors of pet shops and other pet vendors under the provisions of the Pet Animals Act (1951). Before granting a licence the local authority must be satisfied that the animals are kept in accommodation that is suitable; that they are supplied with appropriate food and drink; and are adequately protected from disease and fire. The local authority may attach conditions to the licence, may inspect the licensed premises at all reasonable times and may refuse a licence if the standards at the premises are unsatisfactory or if the terms of the licence are not being complied with.

Under the Animal Welfare Act (2006)\(^1\) which applies in England and Wales and the Animal Health and Welfare (Scotland) Act 2006\(^2\) in Scotland those responsible for animals, including pet vendors, have a responsibility towards the welfare of the animals in their care. Under these Acts it is an offence to cause unnecessary suffering to a protected animal, whether by an act or omission. Vendors also have a legal ‘duty of care’ towards the animals in their care. Vendors must therefore take such steps as are reasonable in all the circumstances to meet the welfare needs of the animals, to the extent required by good practice. The Acts define an animal’s needs as including:

- Its need for a suitable environment
- Its need for a suitable diet
- Its need to be able to exhibit normal behaviour patterns
- Any need to be housed with, or apart from, other animals
- Its need to be protected from pain, suffering, injury and disease

During the inspection, prior to the issue of a licence, it is important that the five needs as outlined above are considered. Defra, the Welsh Assembly Government and the Scottish Government have produced various Codes of Practice under the Animal Welfare Acts, which outline in more detail certain species’ needs that can be referred to for guidance. Issues specific to pet shops and other pet vendors are covered in this document.

The Animal Welfare Acts also increased the minimum age at which a person can buy an animal to 16 and prohibit giving animals as prizes to unaccompanied children under this age. In Scotland, there is a prohibition on giving animals as prizes.

Another key objective in developing these model licensing conditions is to encourage conditions in pet shops licensing and a consistency of approach across local authorities which minimises the risk of transmission of disease from animals to humans, alongside the need to protect animals from cruelty and ill-treatment and to encourage good standards of animal husbandry in pet vending.

Humankind shares a world with animals; it is unsurprising therefore that we also share some diseases. Zoonoses, or zoonotic disease are infectious diseases transmissible between humans and other animals; many thousands of zoonotic disease have been identified. While the reported instances of transmission are infrequent, they nevertheless represent significant disease prevalence. The risk to humans depends on the kind of disease and the type of exposure.

---
\(^1\) www.defra.gov.uk/foodfarm/farmanimal/welfare/act
**Legislation/Orders that are relevant**:  

**England**  
- Pet Animals Act 1951  
- Dangerous Dogs Act 1991  
- Dangerous Wild Animals Act 1976  
- Breeding of Dogs Act 1973  
- EU Regulation on the protection of animals during transport (EC) 1/2005  
- Animal Welfare Act 2006  
- Docking of Working Dogs’ Tails (England) Regulations 2007  

**Scotland**  
- Pet Animals Act 1951  
- Dangerous Dogs Act 1991  
- Control of Dogs (Scotland) Act 2010  
- Dangerous Wild Animals Act 1976  
- Breeding of Dogs Act 1973  
- EU Regulation on the protection of animals during transport (EC) 1/2005  
- Welfare of Animals (Transport)(Scotland) Order 2006  
- The Prohibited Procedures on Protected Animals (Exemptions) (Scotland) Regulations 2010  
- The Licensing of Animal Dealers (Young Cats and Young Dogs) (Scotland) Regulations 2009

**Wales**  
- Pet Animals Act 1951  
- Animal Welfare Act 2006  
- The Welfare of Animals (Transport) (Wales) Order 2007  
- The Docking of Working Dogs’ Tails (Wales) Regulations 2007  
- Mutilations (Permitted Procedures) (Wales) Regulations 2007  
- Dangerous Dogs Act 1991  
- Dangerous Wild Animals Act 1976  
- Breeding of Dogs Act 1973  
- EU Regulation on the protection of animals during transport (EC) 1/2005  

The working group agreed that the LGA Model Standards\(^4\) needed to be updated whilst anticipating secondary legislation under the Animal Welfare Act 2006. These conditions should therefore not be seen as a substitute for secondary legislation.

---

3 All legislation referred to in this document is intended to represent the most recent version

The groups consulted included:

- British Veterinary Association
- Cats Protection
- Chartered Institute of Environmental Health
- Department for Environment, Food and Rural Affairs (Defra)
- Dogs Trust
- Federation of Companion Animal Societies
- Feline Advisory Bureau
- Local Government Association
- Ornamental Aquatic Trade Association
- Pet Industry Federation
- Rabbit Welfare Association & Fund
- Reptile and Exotic Pet Trade Association
- Royal Society for the Prevention of Cruelty to Animals

Special thanks also to:

- Peter Scott – Zoo and Aquatic Veterinary Group/Companion Animal Welfare Council
- William H Wildgoose – Fish Veterinary Society/Midland Veterinary Surgery
- Ian Strachan – Scottish Government
- Wood Green Animal Shelters
- OneKind

Definition of terms

** A batch should be defined as a group of animals arriving from the same supplier, at the same time

**m² is a measurement of area. One m² measures one metre by one metre. Consequently two m² measures 2 metres by 1 metre. (4 square metres measures 2 metres by 2 metres).
Schedule A – General conditions

1. Licence Display

1.1 Condition
The licence or a copy of the licence must be suitably displayed to the public in a prominent position

Guidance
For security reasons, the licence should not display the licence holder’s home address.

2. Accommodation

2.1 Condition
Animals must at all times be kept in accommodation designed to prevent escape and an environment suitable to their species and condition with respect to behavioural needs, situation, size, temperature, ventilation, and cleanliness. All accommodation must avoid drafts and overexposure to direct sunlight and must be kept in good repair.

Guidance
Animals should be able to move around freely, climb, fly, swim and jump where appropriate, and be comfortable in their environment. Definitions of appropriate sizes and materials are in the appropriate schedules to this document. Regular maintenance and repair will prevent injury from damaged housing. Temperature monitoring devices should be provided. It is important to avoid draughts.

2.2 Condition
Ventilation must be provided to all interior areas without the creation of excessive, localized draughts. Ventilation is important as an aid to disease control and aims to decrease smell accumulation and prevent excessive humidity of the atmosphere.

Guidance
The spread of airborne infections can be a significant risk. Excessive or inadequate humidity can cause other health problems.

2.3 Condition
If animals are displayed outdoors, they must have protection appropriate to their species

Guidance
This should include shelter from wind, rain or snow and/or the sun and predators if appropriate.

2.4 Condition
In order to control the spread of disease, and to prevent injury, housing must be constructed of non–porous materials or be appropriately treated. Junctions between all sections need to be fully cleanable.

Guidance
Appropriate housing will prevent direct transmission of disease and injuries. This will maintain structural integrity and ensure dry, easily cleansed surfaces. In general, untreated wood is not an appropriate material as it cannot be thoroughly cleaned.

2.5 Condition
Animals must be kept in housing which minimises stress from other animals or the public. Signage must be in place to deter public interference.

Guidance
An area to hide away, if needed, will help to reduce stress levels for the animals. In addition to signs, other measures maybe required, such as limiting access to some sides of animal enclosures. Care should be taken to avoid sensory contact between prey and predator species.

2.6 Condition
All animals for sale must be readily accessible and easy to inspect by staff.

Guidance
This should help to ensure that the cage is kept clean and hygienic and animals can be easily observed for illness or injury.
2.7 **Condition**
Accommodation must be cleaned as often as necessary to maintain good hygiene standards.

**Guidance**
To maintain a clean environment, a cleaning Standard Operating Procedure (SOP) should be provided and should detail the routine daily cleaning regime and the procedure for cleaning between periods of occupation. Soiled bedding should be removed frequently to ensure animals do not have to lie in it.

2.8 **Condition**
Where accommodation is on a tiered system, water, food or droppings must not be allowed to enter the lower housing.

**Guidance**
This will prevent contamination of the lower cages. This does not apply to centrifuged fish systems or aviaries where perching and ground birds are housed together.

2.9 **Condition**
All accessories provided for environmental enrichment in the accommodation must be appropriate for the species.

**Guidance**
To stimulate the performance of natural behaviours.

3. **Exercise Facilities**

3.1 **Condition**
Suitable and sufficient facilities must be available where appropriate.

**Guidance**
Animals must be able to exhibit normal behaviour patterns and this may require the provision of suitable space for exercise.

4. **Register of Animals**

4.1 **Condition**
A purchase register must be maintained for all animals detailing their source and identification where appropriate.

**Guidance**
This can be by cross referenced to an invoice file. The purpose of the register is to ascertain the source of the animals.

4.2 **Condition**
A sales register must be maintained for:

4.2.1 **Dogs**
4.2.2 **Cats**
4.2.3 **Psittacines**

4.2.4 **Species contained in the Schedule to the Dangerous Wild Animals Act 1976**

**Guidance**
The purpose of the register is for emergency contact of purchasers. The name, address and telephone number of the purchaser should be obtained. This is not required for other species.

4.3 **Condition**
Animals under veterinary treatment must be identifiable.

5. **Stocking Numbers and Densities**

5.1 **Condition**

No animals other than those specified in the licence, may be stocked.

The licence conditions should clearly state the numbers for each species or species group that may be kept on the premises, except fish. Please refer to Schedules for individual species for more details.

Animals are defined as any vertebrate animals; invertebrates are exempted from the regulations.

5.2 **Condition**
Where appropriate, all animals must be housed in social groups of suitable size.

**Guidance**
Details can be found in the relevant schedules.

6. **Health Disease and Acclimatisation**

6.1 **Condition**
All animals for sale must be in good health.

**Guidance**
Vendors and staff are responsible for providing the animals’ needs including good health care. Illness and obvious parasitic infection should be addressed before the animal is sold. Veterinary advice should be sought in any case of doubt.

Transport and the introduction to a novel environment are stressful and animals should be allowed to acclimatise before being further stressed by being offered for sale. Where animals are obtained for sale to a specific client it may be acceptable for the animal to be sold immediately.
All animals should receive appropriate vaccination where required for the species, as advised by the retailer’s veterinary surgeon. Veterinary advice must be sought whenever necessary.

A Record of Treatment should be provided to the purchaser. Vaccination courses should begin at the appropriate age for each species.

6.2 Condition
Any sick or injured animal must receive appropriate care and treatment without delay. These must only be treated by appropriately competent staff or veterinary surgeons.

Guidance
“Care and treatment” may include euthanasia but under no circumstances may an animal be euthanised other than in a humane and effective manner. In case of doubt, veterinary advice must be sought.

6.3 Condition
Provision must be made for the isolation of sick/injured/infectious animals and those that might reasonably expected to be carrying serious infectious diseases.

Guidance
Isolated animals should be kept in a secure, comfortable location where their condition and needs can be kept, also detailing treatment. For ornamental fish, in–line UV treatment or other sterilising devices effectively provide a means of isolating individual tanks in multiple tank systems. They must be of a proper size and maintained in accordance with manufacturers’ recommendations.

6.4 Condition
Any animal with an abnormality which would materially affect its quality of life, must not be offered for sale. When in doubt, veterinary advice should be sought.

Guidance
Information on any known conditions should be provided to the new owner.

6.5 Condition
All reasonable precautions must be taken to prevent the outbreak and spread of disease. No animal which is suffering from, or could reasonably be suspected of having come into contact with any other animal suffering from any infectious or contagious disease or which is infested with parasites, shall be brought into or kept on the premises unless effectively isolated.

Guidance
Precautions should include regular cleaning (see 2.6) and good personal hygiene of staff in addition to effective quarantine of incoming groups of animals except for fish. Staff handling animals should wash or disinfect, and rinse if appropriate, their hands between groups. The shop should be registered with a veterinary practice and there should be veterinary input to SOPs where appropriate. It is important that the supplying breeders should have a policy for inherited and infectious disease control agreed. Staff should be aware of zoonotic transmission.

6.6 Condition
All necessary precautions must be taken to prevent harbourage, or the introduction to the premises, of rodents, insects and other pests.

Guidance
“Rodent” and “Insect” excludes animals for sale or feeding.

7. Food and Drink
7.1 Condition
Animals must be supplied with adequate amounts of food and drink, appropriate to their needs at suitable intervals, All food must be suitable for the species concerned.

Guidance
Water should be available at all times except for those species where it may be harmful. An SOP should be produced for basic nutritional needs for each species or species group, and age group if appropriate. The owner should be advised to continue feeding consistent with the diet given by the pet shop.
7.2 **Condition**

Food and Drink receptacles must be appropriate to the species, constructed and positioned to minimise faecal and urine contamination and spillage. Receptacles must be cleaned out at regular intervals.

**Guidance**

Faecal and urine contamination is a risk to health. Maintaining a clean environment may require regular cleaning of receptacles. Receptacles should be thoroughly cleaned before being moved between batches/groups.

8. **Food Storage**

8.1 **Condition**

All food, excluding live foods intended for feeding to animals on the premises, must be stored in impervious closed containers.

**Guidance**

Such containers prevent spoilage of the food or attraction of rodents or pests to the premises.

8.2 **Condition**

The containers and equipment used for feeding must be kept in a clean and sound condition.

**Guidance**

There must be suitable facilities for cleaning of receptacles and equipment which should be separate from staff facilities.

9. **Observation**

9.1 **Condition**

All animals must be attended to at regular intervals, except where defined in the schedule, at least once daily, and appropriate to the individual animal.

**Guidance**

Regular checks and observation records aid in early detection of illness, injury or behavioural problems and should be considered very important for all animals.

A system of recording observation should be maintained.

10. **Disposal of Waste**

10.1 **Condition**

All excreta and soiled bedding for disposal must be kept in a hygienic manner and stored in impervious containers with close fitting lids - away from direct sunlight.

**Guidance**

This is important for biosecurity and odour reduction.

Excreta and soiled bedding should be removed from the premises on a regular basis, at least weekly, disposed of to the satisfaction of the appropriate local authority, and in accordance with current regulations and good waste management practice. Premises should maintain a contract for removal with an appropriate company and adhere to local authority regulations.

There should be appropriate arrangements in place for removal of dead animals.

11. **Transportation to the Premises**

11.1 **Condition**

When receiving animals, the licensee must make reasonable effort to ensure that they are transported in a suitable manner.

11.2 **Condition**

Any animals received or consigned shall be transported according to the regulations laid down in current legislation.

11.3 **Condition**

Animals must be transported or handed to purchasers in suitable containers.

**Guidance**

Buyers should be advised how to transport animals home so as to minimise stress.

12. **Sale of Animals**

12.1 **Condition**

No mammal shall be sold un–weaned or, if weaned, at an age at which it should not have been weaned.

**Guidance**

Young mammals require nutritional and behavioural support from their mothers.

12.2 **Condition**

In the case of non–mammals, they must be capable of feeding themselves.
13. Dangerous Wild Animals as defined by the Dangerous Wild Animals Act 1976

13.1 Condition
When dangerous wild animals are kept, the cages must be of a secure construction appropriate to the species and kept locked.

Guidance
Safety of staff and the general public should be of utmost importance and safety barriers may aid in this, as well as prevention of escape.

13.2 Condition
The local authority must be notified in the event that the pet shop wishes to offer for sale, any animal on the Schedule to the Dangerous Wild Animals Act.

Guidance
The primary requirements of the Act are to protect the public but there are also welfare implications.

Although it is acknowledged that there is an exemption contained within the Act in relation to pet shops, it is recommended that consideration should be given to complying with any special requirement(s) specified in the Act for the safe accommodation and care of the animal.

Licensees selling animals on the Schedule to the Dangerous Wild Animals Act should inspect the purchaser’s licence to keep such an animal, and inform the issuing authority of the details of the purchase. Licensees should take note of the latest guidance from Defra/Scottish Government.

14. Pet care advice, staff training and knowledge

14.1 Condition
The licensee must ensure that the purchaser is informed of the correct care of the animal covering feeding, housing, handling, husbandry, accessories and veterinary care.

Guidance
Pet care leaflets or other similar written instructions suitable for the species (or group of species) in question should be made available to customers free of charge at the time of purchase, in addition to any offer to purchase pet care books or leaflets. Information can be in the form of Codes of Practice issued by governments. In addition, information may also be made available electronically.

14.2 Condition
Appropriate reference materials on the care of each species must always be available for use by staff.

Guidance
Further advice can be obtained from the organisations listed in the ‘Useful Contacts’ section at the back of this document.

14.3 Condition
Staff members must be able to provide suitable advice to purchasers and answer questions as required by them.

No animal should be stocked or sold unless the staff or at least one member of staff on call is familiar with the care and welfare of the animals stocked and has a recognised qualification and/or suitable experience/training.

14.4 Condition
The licensee must be able to demonstrate appropriate staff training is carried out and that staff are competent in pet shop management and animal handling.

Guidance
Further advice, guidance and training can be obtained from the organisations listed in the Useful Contacts section.
15. Fire and other emergency precautions

15.1 Condition
Suitable emergency precautions and written procedures must exist and be made known to all staff, including arrangements for evacuation of animals.

Guidance
Staff should be aware of these procedures and a copy should be displayed for staff to refer to as and when needed. Evacuation should be regularly practised and practices recorded. All staff should undergo regular training and records should be kept of such training.

15.2 Condition
Entrances and exits must be clear of obstructions at all times.

Guidance
To facilitate risk free evacuation if needed, when designing accommodation, consideration should be given to using systems which would allow timely removal of the animals in the case of emergency. This provision would not usually apply to aquaria and ponds.

15.3 Condition
Suitable fire fighting, prevention and detection equipment must be provided, maintained, regularly serviced and sited as advised by the local fire protection/prevention officer and approved by the local authority.

Guidance
This will ensure that, if needed, the equipment will function correctly. Staff should be properly trained on the use of equipment provided.

15.4 Condition
The licensee, or a designated key holder, must at all times be within reasonable travelling distance of the premises and available to attend in case of emergency.

Guidance
A reasonable distance would, in normal conditions, be interpreted as no more than 20 minutes travelling time.

15.5 Condition
A list of key holders must be logged with the local police and local authority.

Guidance
For contact in cases of emergency.

15.6 Condition
In the interests of animal welfare, the following notice must be displayed prominently at the front of the premises: “In case of an emergency dial 999”.

Guidance
For information of the public in cases of emergency, when a staff member is not on site.

15.7 Condition
When pet shops are sited within other premises, the licensee or key holders must have access at all times to the premises containing the animals.

Guidance
This is vital for access to the animals at all times to ensure correct care is provided.

15.8 Condition:
All electrical installations and appliances must be maintained in a safe condition.

Guidance
For health and safety of staff and animals.

15.9 Condition
There must be an effective contingency plan for essential heating, ventilation and aeration/filtration systems, as appropriate.

Guidance
Some species are very sensitive to temperature fluctuation.
Schedule B – Dogs

1. **Condition**
   Puppies must be weaned before leaving the mother.

   **Guidance**
   To ensure puppies can eat the food provided. Puppies must be 8 weeks old or over. Council Regulation (EC) No. 1/2005 on the protection of animals during transport and related operations prohibits the transport of puppies without their mother before this age.

2. **Condition**
   The minimum kennel size must be:

   2.1 For a batch of small breed puppies – max 6 pups – 1.5m² for sleeping, plus 2m² for exercise

   2.2 For a batch of medium breed puppies – max 4 pups – 2m² for sleeping, plus 2m² for exercise

   2.3 For a batch of large breed puppies – max 2 pups – 2m² for sleeping, plus 2m² for exercise

   These are minimum requirements, for larger batches the size of the pens should be adjusted pro-rata accordingly. Ideally the puppies should have free access to the exercise area at all times. Any covered pens should have a minimum height of 1.8m or removable covers to allow adequate access by staff for cleaning. These are minimum standards and meeting the correct size of pens alone are not a defence if the welfare of the animals are in question.

   **Guidance**
   The kennel area should be large enough to allow separate sleeping and activity areas. The kennel should allow each puppy to be able to walk, turn around and wag its tail without touching the sides of the kennel. The puppies should have sufficient room to play, stand on their hind limbs and to lie down without touching another individual. The kennel size required will increase in relation to the size and number of puppies housed at any one time. The length and the width should be sufficient to allow all the puppies to lie outstretched without their noses or tails touching the walls or other individuals. In certain circumstances it is permissible to have separate exercise areas to sleeping areas but in such cases puppies must be given access to the exercise area at least four times a day. Any separate exercise area should be fully cleaned and disinfected between its use by different batches of puppies.

3. **Condition**
   Suitable and sufficient exercise facilities must be available and accessible where appropriate.

4. **Condition**
   Extreme temperatures must be avoided.

   **Guidance**
   Puppies are relatively sensitive to high/low temperatures. Temperatures should not normally go below 12°C or exceed 26°C

5. **Condition**
   General bedding must include an adequate amount of absorbent material.

   **Guidance**
   The use of enough absorbent material allows urine and faeces to be contained and reduce contamination of the puppies.

6. **Condition**
   Any soiled material must be removed at least four times a day or as required to ensure the puppy does not have to lie in a soiled area.

   **Guidance**
   Puppies do not discriminate in where they toilet and this maintains a clean environment. A cleaning schedule or SOP should be provided.

7. **Condition**
   A specific lying place must be provided lined with soft material.

   **Guidance**
   The use of soft material will prevent skin lesions being caused by soiling or pressure sores.

8. **Condition**
   Puppies must be fed at least four times daily, at appropriate intervals.

   **Guidance**
   The diet should be appropriate for puppies.
9. **Condition**

Puppies must have frequent, quality contact time with staff.

**Guidance**

“Suitable intervals” for puppies to be visited are frequent, as they require to be socialised. It is recommended that this should be a minimum of 4 times per day with 20 minutes of interaction per batch. There should be an SOP.

10. **Condition**

Batches of puppies must not be mixed until they have been on the premises for seven days or have shown no sign of infectious disease for seven days.

**Guidance**

Puppies are particularly susceptible to disease as they have immature immune systems. The new owner should be advised to register the puppy with a vet.

11. **Condition**

Ideally, single puppies must not be left alone in a kennel, but where they are, special attention should be paid to specific human interaction. When they are mixed they should be of similar size, age and temperament and there should be good supervision of mixing.

**Guidance**

Isolating healthy puppies does not allow them to exhibit natural behaviour patterns.

12. **Condition**

There must be environmental enrichment in all kennels.

**Guidance**

To allow puppies to exhibit normal behaviour patterns. Toys should only be given under supervision and should be easily cleaned or replaced between batches.

** Please see ‘Schedule A – General Conditions’ for food, water and isolation conditions
## Schedule C – Cats

1. **Condition**
   Kittens must be weaned before leaving the mother.
   
   **Guidance**
   To ensure kittens can eat the food provided. Kittens must be 8 weeks old or over. Council Regulation (EC) No. 1/2005 on the protection of animals during transport and related legislation prohibits the transport of kittens without their mother before this age.

2. **Condition**
   The minimum pen floor area for a batch of up to 4 kittens, up to 12 weeks of age, must be 1 m², with a minimum height of 0.6m (for example, 0.6m x 1 x 1) No dimension must be less than 0.6m. Any shelving or platforms must be in addition to the minimum floor area. Each additional kitten must have 0.25m² additional floor space.
   
   **Guidance**
   Kittens require adequate space to play together and to have space for a litter tray and bed. Varying heights to enable climbing should each also be provided. There should be adequate space for feeding, drinking, sleeping and litter tray to be kept separate.

3. **Condition**
   Extreme temperatures must be avoided.
   
   **Guidance**
   Kittens are relatively sensitive to low temperatures owing to their small body weight. Temperatures should not normally go below 15°C or exceed 26°C.

4. **Condition**
   Disposable or washable bedding must be provided and kept clean.
   
   **Guidance**
   Kittens need a warm sleeping, soft area, away from the litter tray and food.

5. **Condition**
   A litter tray and appropriate litter must be available at all times and cleaned and disinfected at least once daily with an appropriate disinfectant which is safe for use with cats and cleaned as appropriate. The disinfectant should be anti-viral and used in accordance with manufacturers’ instructions, as some disinfectants are toxic to cats.

6. **Condition**
   Kittens must be fed at least four times daily, at appropriate intervals.
   
   **Guidance**
   The diet should be appropriate for kittens.

7. **Condition**
   Batches must not be mixed and if several batches are kept in one area then the pen must have solid sides.
   
   **Guidance**
   Diseases spread very easily between litters, both by direct contact or by sneezing. Kittens are particularly susceptible to disease as they have immature immune systems. The new owner should be advised to register the kitten with a vet.

8. **Condition**
   Kittens must have frequent, quality contact time with staff.
   
   **Guidance**
   It is recommended that this should be a minimum of 4 times per day with 20 minutes of specific interaction per batch. Kittens should be protected from over-handling by staff or the public as they require time to rest.

9. **Condition**
   There must be environmental enrichment in all cages such as toys, climbing frames and platforms.
   
   **Guidance**
   To allow kittens to exhibit normal behaviours, particularly climbing. Toys should be easily cleaned or replaced between batches.
Schedule D – Rabbits

1. **Condition**
Rabbits must be correctly sexed and housed in same sex groups.

**Guidance**
Rabbits are easier to sex at 8 weeks than any earlier, which will help prevent mis-sexing and unwanted litters.

2. **Condition**
The minimum enclosure size must be:  
0.4m² for up to 4 standard juvenile rabbits and a height of 0.4m. 0.5m² for up to 2 giant breed juvenile rabbits and a height of 0.5m.  
These are minimum requirements, for larger batches, larger breeds or adult rabbits the size of the pens should be adjusted pro-rata accordingly.

**Guidance**
Dwarf Lops/Dutch rabbits are the most commonly available in pet shops and weigh up to 4kgs. The height should allow the rabbit to rear up to perform natural behaviour. Rabbits should be kept in store in groups. Rabbits need to be able to move freely and to be able to perform vital behaviours such as caecotrophy and rearing.

3. **Condition**
There must be environmental enrichment in all enclosures. A hiding place must be provided.

**Guidance**
To allow rabbits to exhibit normal behaviours, indestructible toys; cardboard boxes; chewing substrates should be provided. Toys should be easily cleaned or replaced between batches. Rabbits are prey animals and should have the opportunity to hide if scared or stressed.

4. **Condition**
Extreme temperatures must be avoided.

**Guidance**
Ambient temperature should not normally go lower than 12°C or exceed 26°C. Providing cool water, cool packs in their bedding, air movement and air conditioning may each help to avoid the stress caused to rabbits by high environmental temperatures.

5. **Condition**
Rabbits must be provided with a suitable substrate and bedding material in sufficient amounts.

**Guidance**
Rabbits need a warm, softly-bedded sleeping area away from the litter and food/water.

6. **Condition**
Visibly soiled substrate and bedding must be removed daily. The pen should be thoroughly cleaned and disinfected before introducing a new animal.

**Guidance**
The disinfectant should be effective against both viral, bacterial and parasitic infection and safe for use on rabbits. Check with a vet or manufacturer if unsure. Diseases such as E-cuniculi can be spread via urine, so thorough cleaning is required between new occupants. Rabbits often choose to toilet in the sleeping area of a hutch and a litter tray could be placed here.

7. **Condition**
If batches are mixed you must ensure all animals are free from obvious parasitic infection.

**Guidance**
Diseases spread very easily between litters. Rabbits should be housed with batch mates where possible.
8. **Condition**
Rabbits must have a constant supply of fresh hay and water, and be offered an appropriate amount of dry food for the breed and age. Feed dishes should be suitable to ensure feed does not get contaminated by urine or faeces.

**Guidance**
Rabbits teeth are open rooted and therefore constant access to good quality hay is essential, for dental health, gastrointestinal health (without a constant supply of fibrous food, rabbit GI tracts slow down) and behavioural reasons (to relieve boredom). It is vital that hay is available throughout the day and sufficient provided for them at closing time to last them until the next business day. Dry food should be provided for youngsters to assist growth, see manufacturers instructions, but should not be fed ad-lib.

9. **Condition**
Animals must be provided with an appropriate diet and any new feeds must be introduced slowly.

**Guidance**
Due to the delicate digestive system, particularly under stress, if diets are to be changed then a slow transition between diets is advisable.
Schedule E – Other small mammals

1. **Condition**
   All small mammals must be correctly sexed and housed in single sex groups unless a solitary species (or sold as a breeding pair).
   
   **Guidance**
   To help avoid unwanted litters, all animals should be sexed immediately on arrival to the premises and housed in single sex groups. Animals from different sources should not be mixed.

2. **Condition**
   Animals must at all times be kept in suitably sized accommodation.
   
   **Guidance**
   Animals should be able to freely move around the accommodation and be able to perform natural behaviours. See attached table for species relevant sizing.

3. **Condition**
   Animals must be provided with a suitable substrate in sufficient amounts.
   
   **Guidance**
   Providing sufficient and appropriate substrate keeps the accommodation clean and dry and allows digging where appropriate. There are a number of substrates available and the type used will depend on the animal kept.

4. **Condition**
   Animals must be provided with a suitable bedding material in sufficient amounts.
   
   **Guidance**
   Bedding provides a place to sleep and rest, the type used will depend on the animal kept. It should be provided in sufficient quantities to enable the animal to feel secure and warm.

5. **Condition**
   Animals must be provided with places to hide. Accessories and enrichment should be provided, suitable to the species.
   
   **Guidance**
   Animals must be given the opportunity to hide as a natural instinct and be given suitable accessories to allow for stimulation and to reduce stress. Chinchillas and Degus should be given the opportunity to use a sand bath by offering one on a regular basis, e.g. 10 minutes daily. Rodents need to express natural behaviour such as running and chewing/gnawing. Toys such as hides, tunnels, paper bags filled with hay and fruit twigs are ideal for expressing natural foraging behaviour. Animals should be able to move away from direct lighting. Cool hides should be provided to prevent over heating.

6. **Condition**
   Suitable food and drink receptacles must be provided and positioned to avoid faecal contamination.
   
   **Guidance**
   Water for small animals is usually provided in clean gravity fill drinking bottles, (which should be of a suitable size for the species) or automatic or semi – automatic drinking systems. Fresh water should be available at all times, or as appropriate to the species; some desert-dwelling species such as jerboas [family Dipodidae] should not be given water ad- lib. Bottles should be kept clean and free from algae.

7. **Condition**
   All rodents must be fed a suitable diet, ad lib and have free access to hay where required.
   
   **Guidance**
   The diet should be appropriate for the breed, life stage and species. Food should be refreshed regularly. Guinea pigs should have sufficient vitamin C in their diet. Guinea pigs are unable to synthesise Vitamin C.

8. **Condition**
   All rodents must be fully weaned on admission.

</table>
Schedule F – Ferrets

1. **Condition**
   Ferrets must be at least eight weeks old
   
   **Guidance**
   Ferret kits can find separation from their mother very stressful and the stress response in a ferret often results in diarrhoea which can prove fatal.

2. **Condition**
   Ferrets must be housed with batch companions
   
   **Guidance**
   Ferrets are naturally social animals that depend on the companionship of their own kind. Lone ferrets often suffer depression including poor appetite and lack of enthusiasm to move or play.

3. **Condition**
   Ferrets must be housed in groups or pairs of either sex. Adult hobs (males) require individual accommodation.
   
   **Guidance**
   Ferret kits can be easily be sexed at 8 weeks of age. Adult, un-neutered hobs (males) may exhibit dominant behaviour and fight, so requiring individual accommodation. House the Jill (female) kits at a reasonable distance to prevent aggression between the hobs as they mature at around 20 weeks. Adult jills (females) should be prevented from having repeated seasons. Jills (females) left in season are prone to estrogen induced anaemia, a factor in shortening their normal lifespan. Veterinary advice should be sought.

4. **Condition**
   Batches of ferrets must not be mixed.
   
   **Guidance**
   Not mixing will reduce the risk of disease spreading. Mixing can be stressful for ferrets.

5. **Condition**
   The minimum pen floor area for a litter of up to 4 ferrets, up to 12 weeks of age, must be 1 m², with a minimum height of 0.6m. No dimension must be less than 0.6m. Any shelving or platforms must be in addition to the minimum floor area. Each additional ferret must have 0.25m² additional floor space.
   
   **Guidance**
   Enclosures should be placed on a hard surface and anchored to the ground. Ferrets require space for their toilet area removed from their sleeping or eating areas. Ferrets require space to exhibit their normal active behaviour – running backwards, forwards and sideways and to climb, explore and play. Ferrets are naturally clean and will usually select one corner as their toilet

6. **Condition**
   Sleeping quarters must be draught free and dark.
   
   **Guidance**
   Ideally sleeping quarters should be raised. Ferrets seek dark areas for sleeping and sleep for long hours, up to twenty a day in the winter. Their natural instinct is to hide whilst sleeping.

7. **Condition**
   Ferrets must have suitable bedding.
   
   **Guidance**
   Suggested bedding includes fabric items that can be laundered, straw and dust extracted wood shavings.

8. **Condition**
   Extreme temperatures must be avoided.
   
   **Guidance**
   Temperatures should not normally go below 12°C or exceed 26°C. Ferrets tolerate cold better than heat. Provide plenty of warm bedding for when it is cold. Be aware heat prostration is likely at 32°C.
9. **Condition**
Ferret kibble must be provided at appropriate intervals.

**Guidance**
Feed a recognised and branded ferret kibble / biscuit. Small, frequent meals or ad lib feeding are recommended as ferrets have a rapid rate of digestion.

10. **Condition**
Water must be supplied in both a heavy based bowl and a water bottle attached to the side of the enclosure.

**Guidance**
Ferrets are renowned for tipping bowls.
Schedule G – Birds

1. **Condition**
   There must be adequate perching space for all birds at the same time. Outdoor aviaries must include sufficient sheltered and non-sheltered space. Cage size must be adequate to allow birds to open their wings fully in all directions. Cages must include appropriate environmental enrichment.

   **Guidance**
   Stocking densities will depend on the type of bird as well as cage dimensions and number of perches. Access to rain can be beneficial for plumage. Some species will need adequate space to fly. Chickens require an appropriate area and substrate to perch.

2. **Condition**
   Perches must be positioned so that birds do not defecate on each other and must be of appropriate size and shape for each species.

3. **Condition**
   Ambient temperature must be appropriate for the species. Extremes of temperatures must be avoided.

   **Guidance**
   Birds are more sensitive to high temperatures.

4. **Condition**
   There must be adequate drinkers/feeders commensurate with the number of birds and these must be cleaned regularly. Bowls etc. must be positioned so that birds do not defecate in food/water.

   **Guidance**
   Birds should not have to compete for drinkers/ feeders and risk exclusion. Passerines should have food available at all times. Enrichment and feeding devices need to be provided for larger psittacids. For parrots, it is preferable to use swinging systems such that the keeper does not need to enter the cage in order to change food/water. Bowls should not be able to be removed from holders by the parrot.

5. **Condition**
   Cages must be constructed from materials suitable to the type and size of birds. Materials must be safe to birds and in good repair.

   **Guidance**
   Enclosures should be placed on a hard surface. Some species require more robust materials. Materials such as loose zinc coating can be toxic to birds.

6. **Condition**
   Windproof nest boxes must be provided in all outside housing and inside where appropriate.

   **Guidance**
   Many birds find sleeping or sheltering in nest boxes an essential form of security or for sheltering from inclement weather but it is recognised that some species, such as canaries, will rarely if ever voluntarily enter nest boxes.

7. **Condition**
   Flooring must be drop-through or easily washed/hosed.

   **Guidance**
   If ground living birds are kept with perching birds then attention should be paid to flooring such that bumblefoot issues are addressed - i.e. no concrete/rough stone. Where natural turf flooring is used, parasite status of the birds should be checked on a regular basis every few weeks.

</table>

*1. It is recommended that, wherever possible, these species are displayed for sale in aviaries or flights rather than cages per se.

*2. It is recommended that, wherever possible, these species are displayed for sale in aviaries or flights if more than two birds are housed together.

*3. The extra-linear centimetre per additional bird, is intended to refer to an increase in either width or length or a combination of the two i.e., a 20cm increase could refer to 20cm width, 20cm length or say 10cm width combined with 10cm length.

</table>
Schedule H – Reptiles and Amphibians

1. **Condition**
   Stocking and density must be appropriate to the species.

   **Guidance**
   Most reptiles and amphibians are not social and may, therefore, be kept individually.
   Communal enclosures should not be stocked as to appear overcrowded, common sense should be observed.
   Mixing of species, although possible, should be undertaken with caution. Some species may require or seek seclusion or privacy either sporadically or permanently and provision for this should be made.

   **Snakes:** may be housed individually or in small groups, of the same species. Snakes known to be cannibalistic, e.g. king snakes (Lampropeltis sp.), should be housed individually.

   **Lizards:** only species of similar size and from similar habitat and geographical areas should be kept communally. Lizards known to be cannibalistic, e.g. Gambelia sp., should be housed individually. Generally adult male lizards in breeding condition should not be housed together and groups of lizards housed communally should be regularly observed for signs of aggression.

   **Tortoises and Terrapins:** only terrapins of similar size and habit and from the similar geographical area should be kept communally. Tortoises of different species should be housed individually. Also, adult males in breeding condition should be housed individually.

   **Frogs and Toads:** only species of similar size, and from similar habitats and geographical areas, should be kept communally. Mixing of taxa (e.g. frog & toad) is not generally recommended. Cannibalistic species, such as horned frogs (Ceratophrys sp.) and African bull frogs (Pyxicephalus sp.) should be housed individually.

   **Newts and Salamanders:** only species of similar size and from similar geographical areas should be kept together.

   Generally mixed taxa [e.g. lizards and tortoises] are not recommended, although paludaria which combine fish with small reptiles and/or amphibians of appropriate species are acceptable.

2. **Condition**
   The enclosure size must be appropriate to the species and adjusted according to its size.

   **Guidance**
   **Snakes:** the length of the enclosure should be no less than two-thirds the overall length of the snake.

   **Lizards:** the length of the enclosure should be three times the full length of the lizard, or larger.

   **Tortoises and Terrapins:** the length of the enclosure should be a minimum of 90cms, or four times the length of the animal, or larger. For aquatic species [turtles, terrapins] the enclosure should allow the animal to swim adequately, i.e. have water depth at least 4 times that of the animal, although some terrapins (e.g. Cuora sp., Terrapene sp. and Glyptemys sp.) do not require such deep water. Terrapins must also have an adequate land basking area.

   **Frogs and Toads:** the length of the enclosure should be minimum 30cm x 30 cm x 30cm, or at least three times the length of the animal, or larger. For sedentary species, such as horned frogs (Ceratophrys sp.) and African bull frogs (Pyxicephalus sp.) the enclosure can be smaller. Fully aquatic species should be able to swim adequately, i.e. water depth should be at least 4 times the depth of the animal.

   **Newts and Salamanders:** the length of the enclosure should be minimum 30cm x 30 cm x 30cm, or at least three times the full length of the amphibian, or larger. Aquatic species should be able to swim adequately, i.e. water depth should be at least 4 times the depth of the animal.

   **Height and Width:** of the enclosure should be appropriate to the species, with arboreal species requiring more height than terrestrial species.
3. **Condition**

Temperature, humidity, lighting and ventilation must be appropriate to the species.

**Guidance**

Ambient and basking temperatures should be appropriate to the species concerned, with the following guidance for commonly kept species.

These are guidelines only and individual species should be researched as requirements for some species will fall outside of these recommendations. Vendors and staff must have access to relevant reference material (books, internet etc.). Basking spots may be provided by convection or radiant heat sources (e.g. light bulb, or heat mat), as appropriate to the species. Ventilation should be appropriate to the species and should allow sufficient change of air without jeopardising the temperature or humidity in the enclosure.

4. **Condition**

Lighting must be appropriate to the species.

**Guidance**

An appropriate light period should be observed. Species requiring UVB lighting, e.g. diurnal lizards and tortoises, should have appropriate UVB emitting lamps. These should be replaced according to manufacturer’s recommendations. Mercury Vapour or Metal Halide UVB emitting lamps may also be used to provide a daytime heat source. UV light sources must not be screened by non UV transmitting glass or plastic. Animals should have areas of shade so that they can escape from the light if desired.

5. **Condition**

Substrate appropriate to the species must be present.

**Guidance**

Substrate should be appropriate to the species concerned and may include, but not be limited to: newspaper, paper towel, bark chip, wood chip, terrarium humus, moss, gravel, calcium carbonate, terrarium sand etc. Measures should be taken to ensure that substrate is not ingested.

6. **Condition**

Enrichment must be provided appropriate to the species.

**Guidance**

Décor should be appropriate to the species and should not be harmful, e.g. sharp rocks, toxic or injurious plants. Décor should be secure and not able to fall and cause injury. Enclosure should be furnished in such a fashion as to allow inhabitants to exhibit natural behaviour, e.g. climb or hide where appropriate.

7. **Condition**

Food and water must be provided in the appropriate manner for the species.

**Guidance**

Feeding habits vary between species and between individuals. Staff should have knowledge of the requirements for all the species held. Food should be presented in a form or pattern that is acceptable to the species concerned. Food supplements [vitamin and minerals] should be provided as appropriate to the species concerned. Live food intended for use should be housed in suitable escape proof containers, and fed appropriately. Fresh foods [salads] should be kept refrigerated where appropriate. Frozen foods intended for use must be stored in an appropriate deep freeze and defrosted thoroughly before use. Feeding records for hatchling snakes should be kept and made available to purchasers. Fresh water should be available at all times, with the exception of certain desert species, such as Uromastyx sp. which should be offered water periodically. Certain species, such as chameleons, do not drink from standing water and should be offered water appropriately, e.g. by a dripper system or sprayer.

8. **Condition**

Hygiene: enclosures must be cleaned appropriately.

**Guidance**

Spoiled food stuffs should be removed at appropriate time periods, at least daily. Substrates should be replaced as appropriate, and spot cleaned daily. Décor should be sanitised as appropriate. Enclosures should be disinfected with appropriate disinfectant as necessary and always between different batches of animals. Disinfectant should be
appropriate for the contaminants likely to be encountered. Disinfectant hand gels should be available for staff to use between animals, to prevent the external environment being contaminated. Water bowls should be cleaned as appropriate and disinfected at least weekly. Slough (shed skins) should be removed daily.

9. **Condition**
Handling must be kept to a minimum at all times.

**Guidance**
Handling must be kept to a minimum at all times. Staff should receive training on how to handle animals and animals which may be aggressive should only be handled by competent staff. Staff and customers should wash hands after handling specimens, and any equipment used should also be disinfected. Customers handling animals prior to purchase should be supervised and offered facilities to wash their hands afterwards.
## Schedule I – Fish

1. **Condition**
   Water quality is a key determinant of fish welfare. To assess it, levels of ammonia and nitrite must be checked first. Only if such measurements exceed the recommended standards below, or there is an unexplained problem, is there any need to proceed further. Minimum water standards must be:

   **Cold Water Species**
   - **Free Ammonia**: max 0.02 mg/l
   - **Nitrite**: max 0.2 mg/l
   - **Dissolved Oxygen**: min 6 mg/l
   - **Nitrate**: max 50 mg/l above ambient tap water

   **Tropical Freshwater Species**
   - **Free Ammonia**: max 0.02 mg/l
   - **Nitrite**: max 0.2 mg/l
   - **Dissolved Oxygen**: min 6 mg/l
   - **Nitrate**: max 50 mg/l above ambient tap water

   **Tropical Marine Species**
   - **Free Ammonia**: max 0.01 mg/l
   - **Nitrite**: max 0.125 mg/l
   - **Nitrate**: max 100 mg/l
   - **pH**: min 8.1
   - **Dissolved Oxygen**: min 4.0 mg/l

   **Guidance**
   It is virtually impossible to determine the quantity of aquatic organisms to be kept in a system purely on a weight or number of aquatic organisms per unit, volume, or water surface area. The variation in holding system used, the quality of husbandry and the types of aquatic organisms stocked vary so greatly that it would render any such system too complicated to be practical or too simple to be useful. The maintenance of water quality standards can be used to determine working stocking densities. The water quality standards should not be met at the expense of a correct feeding regime. Exceptions to these standards might occur e.g. when aquatic organisms are diseased, after transport or other stress. However in these cases appropriate remedial actions e.g. treatment, acclimatisation or isolation should be undertaken. Sea water holds less oxygen than fresh water. The recommended level is 5.5 mg/l so extra care is needed to ensure that levels do not routinely fall below this.

2. **Condition**
   Water quality must be checked regularly and records kept of all tests. Centralised systems must be tested weekly. 10% of individually filtered tanks or vat must be tested weekly. On aquaria or vats in which visual inspection indicates unusual behaviour or deaths, water quality inspections should be undertaken.

   **Guidance**
   One test is representative of all the water in the system of centralised systems. Standalone systems must each be tested. Poor water quality is often the underlying cause of problems presenting as disease or mortalities.

3. **Condition**
   Holding systems must be cleaned and checked regularly.

   **Guidance**
   Aquaria must be checked daily and cleaned as often as is necessary to maintain good hygiene standards, consistent with the rate of stock turnover and consequent stocking densities.

4. **Condition**
   No aquatic organisms should be exposed to excessive light or heat, or lack of adequate warmth.

   **Guidance**
   No fish or other aquatic organism should be subject to rapid fluctuation in light (lights should be on dimmers if automated), temperature and chemical composition of their water, other than for the controlled treatment of disease or as part of a controlled breeding programme. There are in excess of 4000 fish species in trade and thus the acceptable conditions may vary substantially and often counter intuitively. In case of doubt expert advice should always be sought.
Information

Register of Wild Animals and Endangered Species
Some species are listed on the Annexes of EU Wildlife Trade Regulations which implement CITES (Convention on International Trade in Endangered Species). Species listed on Annex A of EU Wildlife Trade Regulations [Council Regulation (EC) No. 338/97] must have a valid Article 10 Certificate and may require microchipping or closed ring. Species listed on Annex B do not require Certificates but the vendor should be able to provide proof the animal was acquired legally.

Further information is available from Animal Health, Wildlife Licensing and Registration Service:
1-15 Temple Quay House, 2 The Square, Bristol, BS1 6EB

Wild-caught specimens listed on Annex IV of the EU Habitats Directive [Council Directive 92/43 EEC] collected within the EU require the appropriate Certification. Captive-bred specimens are exempted from such requirements.

Breeding and Sale of Dogs Act
Puppies/dogs should be identifiable whilst at the shop. Under this legislation, the record should show:

- The identification of the animal
- The date of birth, breed, sex and any distinguishing features
- Details of any veterinary care provided while under care of the shop In addition, it is also good practice to record:
  - Details of any feedback provided to the breeder on health issues such as disease or inherited defects
  - Details of any health screening tests performed on the parents

Microchip is the preferred method of identification.
Useful Contacts

All pet shop licences are issued by your local authority who should be your first point of contact.
